

Introducing CI/CD

What is the benefit of CI/CD ?

10/01/2021

- Reduce the cost of building, testing, and deployment by automating
- Lower costs for deployment, etc., allow for finer grained releases. You can use the extra money to improve customer value.
- Early detection of bugs in the code, so they can be fixed before the impact is too small. As a result, your customers don't leave the service and the company's revenue stays the same.
- Automating the work up to deployment eliminates the need for dependency

- Frequent and automatic checking of test and coding conventions ensures a certain level of code quality. You don't have to worry about inaccessibility so much.
